

SPECIFICATION

SUPERSTRUT™

Pipe Support

The EDI SuperStrut™ pipe support has been optimized to be used on EDI fixed grid systems with FlexAir® PRO disc diffusers. It enhances mechanical integrity, simplifies installation, and lowers total installed cost, making it ideal for long-term performance and customer satisfaction.

Material Features

- Made in premium glass-filled polypropylene for enhanced mechanical strength, durability, and thermal capabilities.
- Non-metallic, suitable for corrosive environments.
- Available for 3-inch, 4-inch, 90 mm, and 110 mm lateral pipes and compatible with all pipe materials.
- Superior mechanical integrity, surpassing the vertical load capacity of stainless steel wire-style supports and more than twice as robust for side loads.
- Easy installation with a single anchor and KlicLoc™ mechanism for quick assembly. The adjustable height base and cradle allow you to easily adjust the pipe elevation, and the installation time is 40% less than with stainless steel wire-style pipe supports.
- Various standard height sizes available, readily adjustable with minimal effort.
- The SuperStrut support secures the header pipe horizontally and vertically with a robust Top Strap, preventing binding and allowing for thermal expansion-induced longitudinal movement.
- Can be used as diffuser end support for FlexAir Pro Tube and Panel Diffusers in specific applications.
